

VideoCron

General

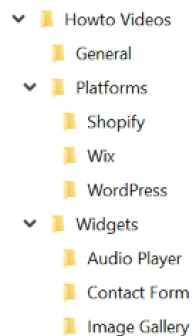

The purpose of this application is to allow the user to batch create multiple videos from different sources (folders).

The videos are Howto videos, instructions on how to add a specific widget to a specific platform.

For example: How to add an *Audio Player* widget to *WordPress*.

The application uses 3 folders:

- **General:** the files in General will be used in all videos (Intro, Closer...)
- **Platform:** a folder with files related to a platform
- **Widgets:** a folder with sub-folders, each of them related to a different widget.

The application will loop and use the files in the folders, merge files them to create multiple videos.

User Interface

The user can select the different folders, set if to use transition between the fiels and select a destination folder where the created videos will be saved.
